Important Information

What is MacPorts?

MacPorts provides an infrastructure for building, installing, and packaging open source software. It is designed to match the functionality of the FreeBSD Ports system and to be extensible for future enhancements.

System Requirements:

This disk image contains a Universal installer for Mac OS X 10.10.x and requires valid TLD, cURL, and OpenSSL installations to function - all present by default on Mac OS X. Also required is the installation of Apple's Xcode project suite, available as a separate installation from your OS X CDs or DVD, or preferably the latest version from Apple's Developer site: http://developer.apple.com/tools/xcode/

Install Location:

The MacPorts installer copies MacPorts to the target directory /opt/local. If you wish to install to any path other than that, you must install:

Standard Install on "Macintosh HD"

This will take 14.6 MB of space on your computer.

Click Install to perform a standard installation of this software on the disk "Macintosh HD".
5. Opna terminal (loka því og opna aftur ef það var opið fyrir) og keyra: sudo port install pspp-devel

6. Svo þarf að keyra upp pspp uppsetningarskránna úr downloads

[Image of box with file]

pspp-0.8.4-0-10.9.
mpkg

7. Þá ætti PSPP að vera komið inn í MacPorts möppuna í applications.
